

SOLID[®] SCREEN

Solar

Your sun protection system dealer:

SOLID SCREEN[®]

Solar

The SolidScreen Solar, our well-known SolidScreen equipped with solar solar powered technology called Solar.

This screen has a solar panel mounted on the headbox that converts the power of the sun into solar energy and then stores it in the battery. This covers 100% of the energy supply of the motor. No extra electricity costs, no extra wiring and no penetration in the wall. Just more ease of use and installation.

Since power is no longer an issue, you even save twice on energy. Thanks to the award-winning zipper technique, combined with the unique structure of the screen fabric, you benefit from the insulating effect both in summer and winter. It makes the SolidScreen Solar our must sustainable screen product to date.

Can be fitted with a slanted or square headbox 105, the standard (45 mm) or XS (35 mm) side-guide and in a wide choice of standard colours. This allows you to assemble the SolidScreen Solar to your own choice.

Features

-  Fully powered by solar energy
-  Solar panel can be placed on the right or left
-  No additional wiring required
-  No need to run cables through the wall
-  Save energy twice: no electricity costs and insulation
-  Wind resistant up to 145 km/h
